CAMS Enterprise Update Release 12.2.6

Revision Date: 05/27/2011

This document describes the items that are being deployed in the 12.2.6 CAMS Enterprise Update Release. Enhancements, modifications, and system corrections are included and are categorized primarily by module. Those items needing CAMS Manager attention have been noted as such. For additional, detailed information and instructions on the functionality additions and changes, refer to the online help files located directly in the CAMS Enterprise application and/or the updated PDF manuals which can be downloaded from the CAMS Community Website. Note that portal updates are not automatically installed on your site and must be applied by your institution.

System Updates are a good reminder to revisit your CAMS installation and ensure that it is configured for maximum security. Three Rivers Systems strongly recommends using SSL (Secure Socket Layer) certificates for all parts of the CAMS system. The CAMS Enterprise application should be maintained behind the institution’s firewall, while the Portals have been designed to face the Internet directly. For more information, please consult your installation documentation or contact the Three Rivers Systems helpdesk.

Registration

1. Update Release 12.2.0 introduced an issue that when using the Repeat Policy, No Repeats, CAMS did not rebuild grades when a grade was entered for students either in CAMS Grade Entry or Faculty Portal Direct Grade Submit thus not updating the students’ grades. This only affected systems using the No Repeats Repeat Policy; a work-around was to manually rebuild grades from the CAMS Manager Module. When using the No Repeats Repeat Policy, CAMS will now rebuild grades correctly.
